DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to an induction apparatus, classified in class 336, subclass 200.
- II. Claims 8-15, drawn to shielding structure, classified in class 336, subclass 84R.
- III. Claims 16-17, drawn to a winding structure for an induction assembly, classified in class 336, subclass 182.
- IV. Claims 19-20, drawn to connection arrangement for an induction assembly, classified in class 336, subclass 192.
- V. Claim 20, drawn to a method of operating an electric machine, classified in class 318, subclass 692.

The inventions are distinct, each from the other because of the following reasons:

Inventions V and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the control apparatus can be used to control a solenoid actuator.

Inventions I and [II-IV] are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case,

Art Unit: 2832

- Invention [I] has separate utility such as an induction apparatus not using shielding structure of II, the winding structure of III or the connection arrangement of IV.

- Invention [II] has separate utility such as a shielding structure not using the induction apparatus of I, the winding structure of III or the connection arrangement of IV.

- Invention [III] has separate utility such as a winding structure not using shielding structure of II, the induction apparatus of I, III or the connection arrangement of IV.

- Invention [IV] has separate utility such as the connection arrangement not using a winding structure of I, the shielding structure of II or the winding structure of III.

See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

- Embodiment 1: figures 1-2;
- Embodiment 2: figure 5.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable

Art Unit: 2832

thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
